

AKACHI MADUAKO

CYBERSECURITY ANALYST | SOC ANALYST | PENETRATION TESTER

Toronto, Ontario, Canada | 226-385-6691 | maduakoakachi@gmail.com

Portfolio: akachimaduako.com | LinkedIn: linkedin.com/in/maduakoakachi | GitHub: github.com/BlackGuyFawkes

PROFESSIONAL SUMMARY

Cybersecurity professional with multi-year experience in penetration testing, vulnerability assessment, security analysis, technical reporting, and remediation guidance across network, application, system, and mobile environments. Hands-on SOC investigation experience using Microsoft Sentinel, Microsoft Defender for Endpoint, KQL, Windows Event Logs, Sysmon, Microsoft 365 audit evidence, process-tree analysis, identity telemetry, email analysis, and IOC correlation. Investigated credential-access, brute-force, phishing/account-compromise, suspicious PowerShell, endpoint-malware, and business-email-compromise scenarios in documented lab investigations. CompTIA Security+ certified with a Diploma in Computer Programming.

CORE SKILLS

Security Operations: Alert Triage | Incident Investigation | Incident Response | Escalation | Security Monitoring | Evidence Documentation | IOC Analysis | MITRE ATT&CK

SIEM / EDR / Logs: Microsoft Sentinel | Microsoft Defender for Endpoint | KQL | Windows Event Logs | Sysmon | Splunk | Wazuh | Microsoft 365 Audit Logs

Threat Investigation: Phishing | Business Email Compromise | Credential Access | Brute Force | Malware | PowerShell | Suspicious Authentication | Process-Tree Analysis

Vulnerability & Pentesting: Nessus | Qualys | Tenable | Nmap | Burp Suite | Metasploit | OWASP ZAP | Nuclei | Nikto | FFUF | CVE/CVSS

Network / Systems: Wireshark | TCP/IP | DNS | pfSense | Snort | Suricata | Active Directory Fundamentals | Windows | Linux/Kali Linux

Scripting / Professional: Python | Bash | PowerShell | Git/GitHub | Technical Documentation | Risk Communication | Stakeholder Communication | Problem Solving

PROFESSIONAL EXPERIENCE

Cybersecurity Analyst / Penetration Tester

2019 - 2023

Upgraded Era ICT

- Investigated security weaknesses across client networks and systems through security analysis, penetration testing, and vulnerability assessments, identifying risk and recommending practical remediation actions.
- Managed findings from discovery through validation, documentation, risk assessment, remediation guidance, and follow-up testing, helping stakeholders prioritize corrective action based on impact and exploitability.
- Prepared technical reports communicating vulnerabilities, evidence, risk, impact, and recommended controls to technical and non-technical stakeholders.
- Automated vulnerability-assessment and reporting tasks with Python, Bash, and PowerShell, reducing assessment time by approximately 15% and improving workflow consistency.
- Updated security-testing methods to reflect emerging threats and security best practices, improving assessment effectiveness by approximately 30%.

Penetration Tester

2020 - 2022

MTN Nigeria | Nigeria

- Conducted authorized security testing across network, application, system, and mobile environments to identify exploitable weaknesses affecting telecommunications products and services.
- Analyzed and documented vulnerabilities, validated technical evidence, supported remediation planning and follow-up testing, and communicated security risks clearly to stakeholders.
- Developed cybersecurity training materials and helped onboard and train 10 new team members, strengthening knowledge transfer and team readiness.

Condo Concierge / Security Operations

2025 - Present

Elite Security | Toronto, ON

- Manage overnight access control, resident and visitor concerns, incident response, escalation, and security documentation in a fast-paced customer-facing environment.
- Maintain detailed incident and shift-handover records, supporting accountability, accurate follow-up, and operational continuity.

SELECTED CYBERSECURITY PROJECTS

[SOC Investigation Portfolio](#) | [Microsoft Sentinel](#), [Defender for Endpoint](#), [KQL](#), [Windows/Sysmon](#), [Microsoft 365](#)

- Investigated a high-severity Mimikatz credential-dumping attempt: correlated Defender evidence with 16 Sysmon events involving wusvc.exe, validated the malicious process chain, and documented a true-positive disposition while distinguishing attempted dumping from confirmed credential theft.
- Investigated a brute-force/password attack using Windows Security Event IDs 4625, 4624, 4672, and 4648; identified 27 failures from the dominant source, including 18 against the compromised account, then correlated successful access across two hosts and escalated the case.
- Investigated a synthetic phishing/account-compromise campaign across email headers, message trace, DNS, proxy/web, identity sign-ins, IOC enrichment, and attachment evidence; correlated victim interaction with subsequent suspicious password-only authentication and documented a high-severity escalation.
- Investigated suspicious SYSTEM-level PowerShell activity using ExecutionPolicy Bypass and attempted LaZagne retrieval; mapped observed behavior to MITRE ATT&CK and documented telemetry gaps rather than overstating unconfirmed process-chain evidence.
- Analyzed a Microsoft 365 Business Email Compromise dataset containing 153 correlated audit events and 21 observed IP values; identified mailbox reconnaissance, a malicious concealment inbox rule, SharePoint downloads, account impersonation, and deliberate reply deletion.

[Pentest Toolkit](#) | [Security Automation](#) | [Python](#) / [Bash](#) / [PowerShell](#)

- Developed an OWASP-focused CLI security-testing toolkit with scope enforcement, automated workflows, findings collection, and Markdown reporting to improve repeatability and documentation quality.

[AutoPwn / Recon Automation](#) | [Security Engineering](#)

- Built recon-to-scan workflows combining asset discovery, live-host checks, technology identification, vulnerability scanning, and structured reporting using tools such as Amass, Subfinder, httpx, Nuclei, and Nmap.

EDUCATION

Diploma, Computer Programming

2025

Seneca Polytechnic | Toronto, Ontario

B.Sc., Microbiology

2017

Federal University Ndufu-Alike Ikwo (FUNAI) | Ebonyi, Nigeria

CERTIFICATIONS & TRAINING

CompTIA Security+ | [Microsoft Azure Fundamentals](#) | [Microsoft Security, Compliance, and Identity Fundamentals](#) | [Fortinet NSE 1](#), [NSE 2](#), [NSE 3](#)

Ongoing: NPower Canada Network Security Professional training
